

## WIND PRESSURE

### Non-cyclone regions

VELUX skylights, roof windows and sun tunnels are wind pressure tested in accordance with AS4285.

### Cyclone regions

The test is cruel. The skylight is fixed to a test bed and sealed to prevent air escaping. Air is then pumped in underneath the skylight to expand it ... and sucked back out. This is repeated over 10,000 times before the torture is over!

All VELUX skylights with High Performance glazing, the GGL roof window and the VELUX flat roof skylight have passed the test and are suitable for tropical conditions in the far northern parts of Australia.
